

Bug2Build – (Bug Fixing + Code Relay)

Bug2Build is a team-based coding competition designed to evaluate participants on their **debugging expertise, problem-solving speed, and collaborative development skills**. The contest follows a progressive format where teams move from identifying and fixing bugs to collaboratively building solutions under time constraints.

The competition consists of **three rounds**. The first two rounds focus on **bug identification and resolution**, testing participants' ability to analyze existing code, locate issues, and implement correct fixes efficiently. The final round introduces a **Code Relay challenge**, where teamwork, communication, and structured coding become critical to success.

In **Bug2Build**, teams must work together to:

- Debug real-world coding issues
- Solve rapid-fire mini problems with accuracy
- Collaboratively build a project by passing code across team members

Each round emphasizes not only technical correctness but also **code quality, time management, and seamless collaboration**. The Code Relay round, in particular, mirrors real-world development workflows where multiple developers contribute sequentially to a shared codebase.

Bug2Build aims to simulate practical software development scenarios, making it an ideal platform for participants to showcase their technical competence, teamwork, and adaptability in a competitive environment.

Team Composition

- Each team must consist of **exactly 4 members**
- Participation is strictly **team-based**
- No change in team members is allowed after registration
- Teams must participate in all rounds with the same members

Round-wise Details:

Round 1: Bug Fixing Challenge (Non-Elimination)

Duration: 45 Minutes

Objective: Identify and fix critical bugs in a given codebase inside a Github repo.

Format:

- Each team will be provided with a project containing **3 major bugs**
- Bugs may include:
 - Logical errors
 - Runtime or compilation issues
 - Broken or incomplete functionality
- Teams must debug and submit a working solution within the allotted time

Evaluation Criteria:

- Correct identification of bugs
- Successful resolution of issues
- Code correctness and stability
- Partial fixes may receive partial credit

Qualification:

No elimination round top performing teams will have advantage in terms of score.

Round 2: Rapid-Fire Debugging (Elimination)

Duration: 30 Minutes

Objective: Solve multiple short debugging tasks accurately and quickly.

Format:

- Teams will receive **10 mini bug issues**
- Each issue is independent and can be solved in any order
- Focus is on **speed, precision, and problem understanding**

Evaluation Criteria:

- Number of correctly solved issues
- Accuracy of fixes
- Time efficiency in submissions

Qualification:

Only shortlisted teams proceed to the Final Round.

Round 3: Code Relay (Final Round)

Duration: 1 Hour

Objective: Build a complete solution collaboratively using a relay-style coding format.

Format:

- A single project will be divided into **4 checkpoints**
- Each checkpoint must be completed by **one unique team member**
- Code will be passed sequentially from one member to the next
- Each participant is responsible for:
 - Completing their assigned checkpoint
 - Ensuring code compatibility for the next member

Rules Specific to Code Relay:

- Each member may work **only on their assigned checkpoint**
- Skipping checkpoints is not allowed
- Final submission must integrate all checkpoints into a working solution

Evaluation Criteria:

- Completion of all checkpoints
- Code integration and functionality
- Quality of handoffs between team members
- Team coordination and logical flow

Rules & Regulations

General Rules & Guidelines

- Participants must adhere strictly to the time limits
 - Use of unfair means, plagiarism, or external assistance is prohibited
 - Internet usage is allowed **only if explicitly permitted by organizers**
 - Teams must submit solutions through the designated platform only
 - Organizer decisions will be **final and binding**
-

Disqualification Criteria

A team may be disqualified if found:

- Sharing solutions with other teams
 - Using unauthorized tools or resources
 - Violating round-specific rules
 - Misbehaving or disrupting the contest environment
-

Judging Parameters (Overall)

- Functional correctness
 - Code quality and clarity
 - Problem-solving approach
 - Team collaboration
 - Time management
-

Declaration

By participating in **Bug2Build**, all participants agree to abide by the rules and regulations stated in this rule book. The organizing committee reserves the right to modify rules if required, with prior notice.

Contact & Support

For any queries or clarifications, participants may contact the organizing team through the official communication channel provided during registration.
